Disclaimer

This presentation contains forward-looking statements regarding the Company's intentions, assessments, or expectations in respect of the Company's future results, financial position, liquidity, development, prospects, expected growth, strategies and possibilities as well as the market within which the Company operates. Forward-looking statements are statements which do not refer to historical facts and which typically contain words such as "considers", "expects", "predicts", "intends to", "estimates", "will", "can", "presumes", "should", "may" and, in each case, negations thereof or other similar expressions. The forward-looking statements in this presentation are based on different assumptions which, in several cases, are based on additional assumptions. Even if the Company considers the assumptions which are reflected in these forward-looking statements to be true, it cannot be guaranteed that they will in fact occur or that they are correct. Given that these assumptions are based on assumptions or estimates and that they are subject to risks and uncertainties, the actual result may, for many reasons, substantially deviate from what is stated in the forward-looking statements.

Such risks, uncertainties, eventualities, and other significant factors may lead to the actual events deviating substantially from the expectations that have been explicitly or implicitly provided for under this presentation through the forward-looking statements. The Company does not guarantee that the assumptions which the forward-looking statements in this presentation are based on are correct, and a reader/participant of this presentation should not unduly rely on the forward-looking statements contained herein. The information, opinions, and forward-looking statements which are either explicitly or implicitly presented herein, are only provided as of the day of this presentation and may be subject to change. Neither the Company nor anyone else undertakes to oversee, update, confirm or provide public notification in respect of any change of any forward-looking statement for the purpose of reflecting the actual events or circumstances which occurs in respect of the content of this presentation, unless required by law or Nasdaq First North Growth Market's rules for issuers.

AlzeCure Pharma in brief

AlzeCure Pharma – In brief

- Working in **Alzheimer's Disease (AD) & Pain** – high unmet medical need & multi-billion sales potential
- Spin-out from **AstraZeneca** – as a result of their exit from the CNS area
- Founded in 2016, out of a research foundation sponsored by **Alzheimerfonden**
- Based at Novum Science Park, **Karolinska Institute**, Stockholm, Sweden
- Three project platforms with multiple **small molecule** candidates with **first-in-class properties**
 - **NeuroRestore®** – A novel symptomatic treatment for cognitive disorders, e.g. AD with disease modifying potential
 - **Alzstatin®** – An innovative preventive & disease-modifying treatment against AD
 - **PainLess** – Innovative projects for osteoarthritic & neuropathic pain
- Listed on **Nasdaq First North Premier** Growth Market, Sweden, (Ticker: ALZCUR)
- Market cap: **218 MSEK** (260219)
- **Cash position: 59,2 MSEK** (Q3 result)
- **European Innovation Council (EIC) grant of 27,5 MSEK** (€ 2,5M) for phase IIa Alzheimer's trial

Professor Jan Lundberg – Board member
Former global head of R&D at Eli Lilly & global head of research at AstraZeneca joining & investing

Professor Jan Lundberg

Jan Lundberg, Professor in neurotransmission

Professor Jan Lundberg has more than 25 years of experience from leading positions in global pharmaceutical companies, including as global head of research at Astra and then AstraZeneca (1996 – 2009) and **global head of research & development** at Eli Lilly (2010 – 2018). He has led the development of more than 200 drug candidates, including Alzheimer's & pain, with 30 approved products in several therapeutic areas.

Before joining Astra, Dr. Lundberg was professor of pharmacology at the Karolinska Institute, where he also received his PhD. His research has resulted in over 500 publications in peer-reviewed scientific journals.

Our Business Model

Are a **Research & Development** company

Research & develop through early clinical phase
and then to **out-license** or **partner** on our projects

Gain incomes through:

Upfront
payments

Milestone
payments

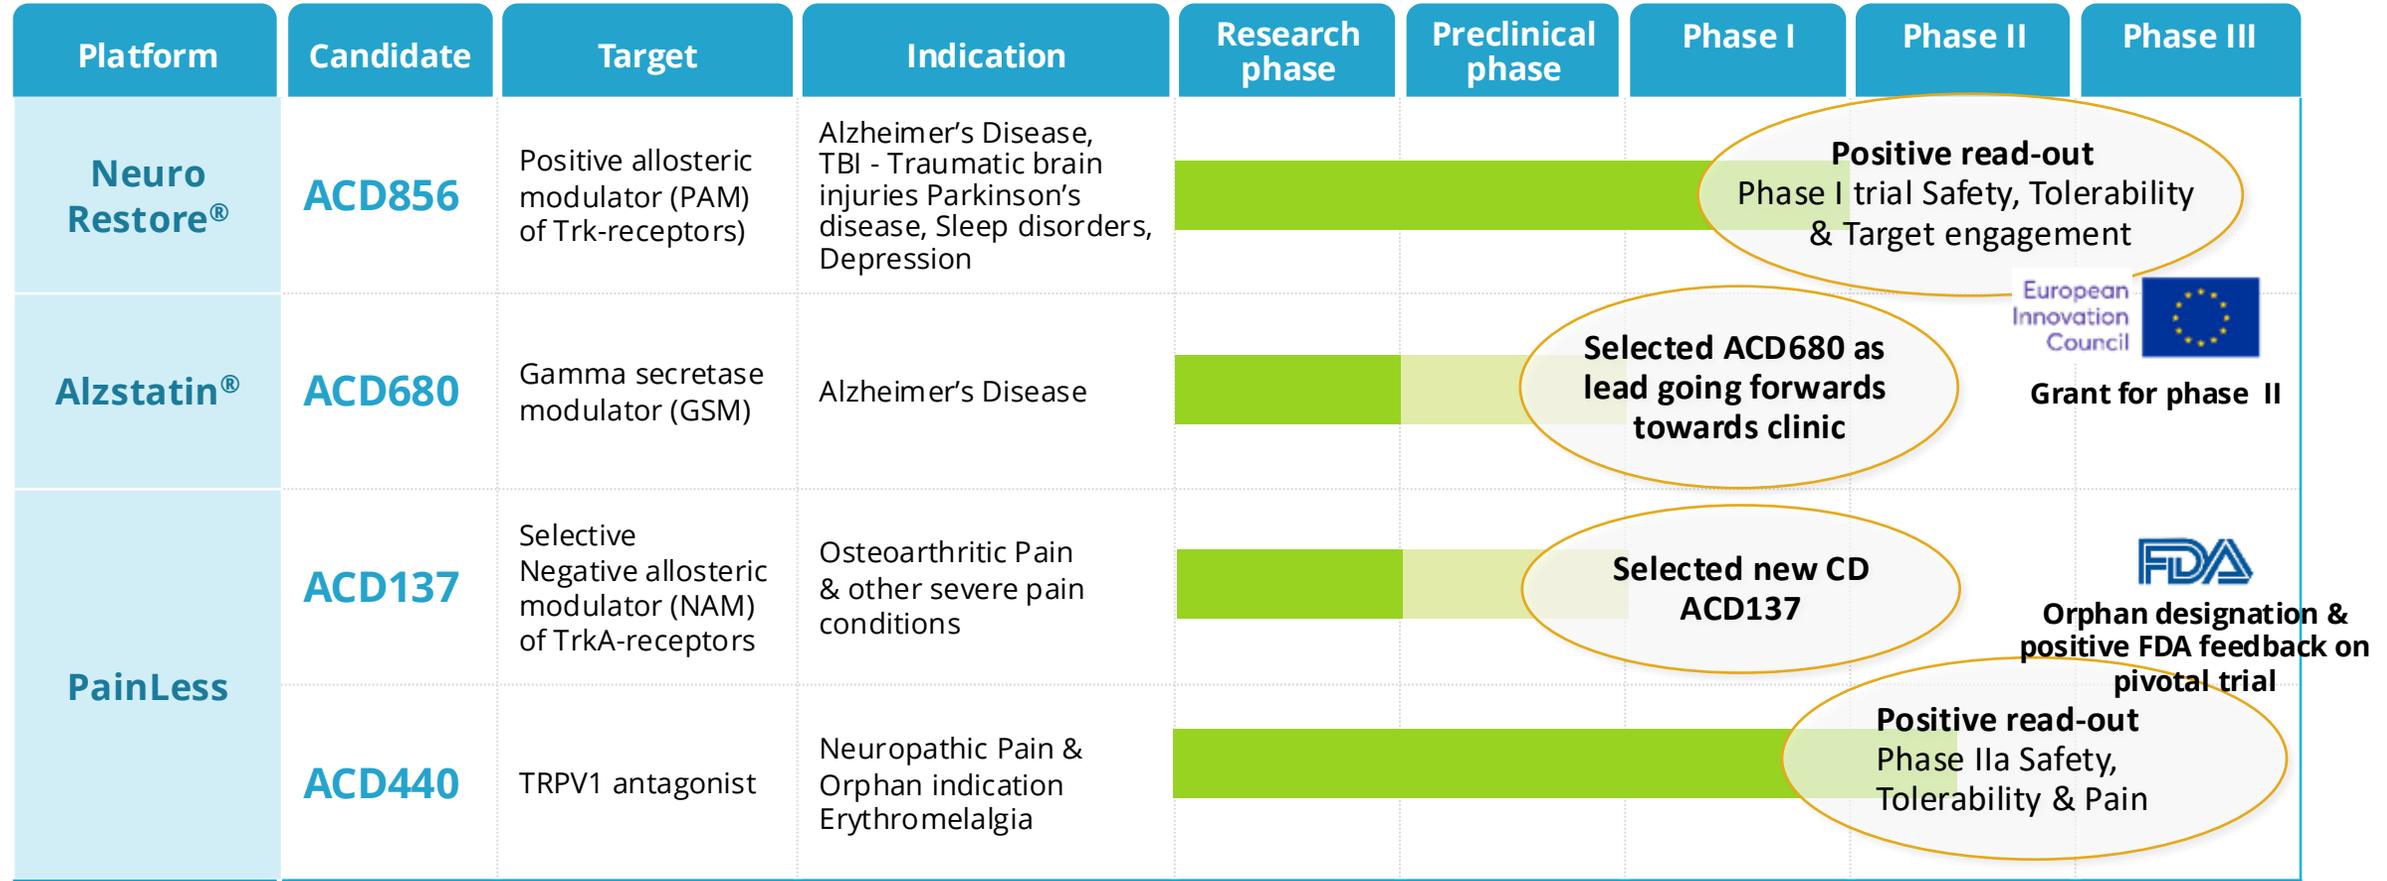

Royalties on
sold products

A pipeline of Small-Molecule Programs

Multiple candidates increase chance of success

 Phase completed

 Phase ongoing

Two Alzheimer's platforms - 1st-in-class properties & potential game-changers

MEETING NEEDS OF AD PATIENTS – ADDRESSING SHORT TERM NEEDS WITH LONG-TERM BENEFITS

Preventive Disease-modifying therapy

Alzstatin[®]

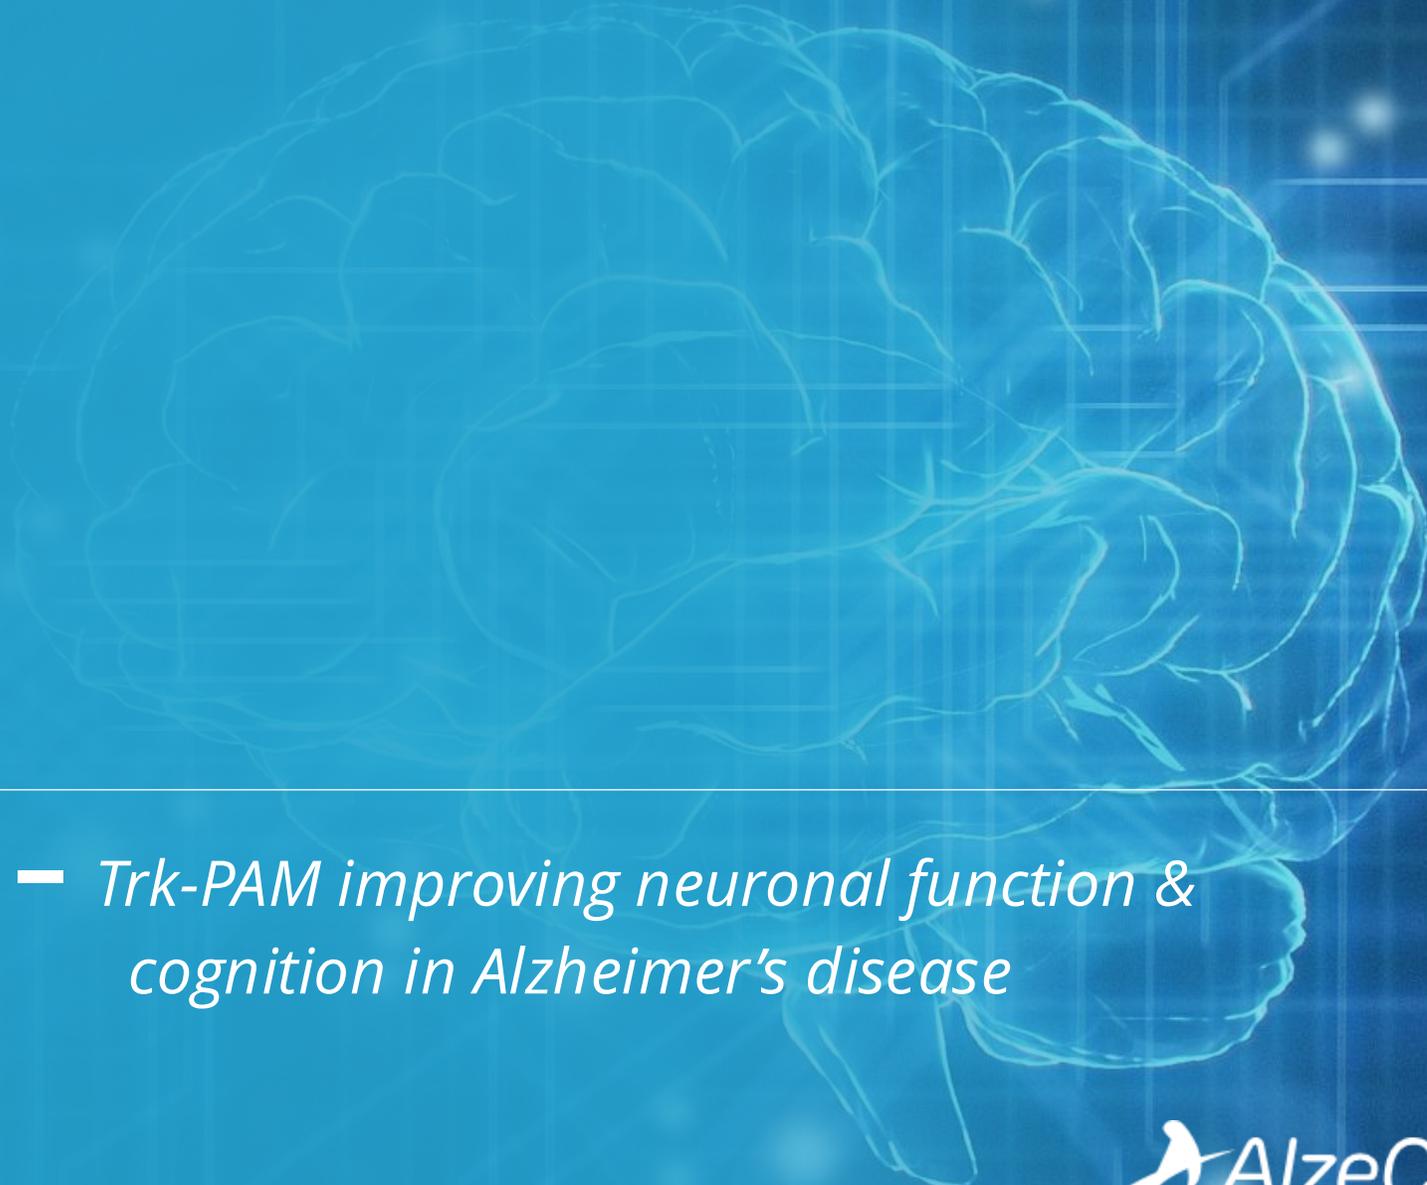

Gamma-secretase modulator
Targeting Amyloid Production
- *Novel Oral Small Molecule*

Symptomatic & pot.
Disease-modifying therapy

NeuroRestore[®]

Trk-PAM
Improving Neuronal & Cognitive Function
- *Novel Oral Small Molecule*

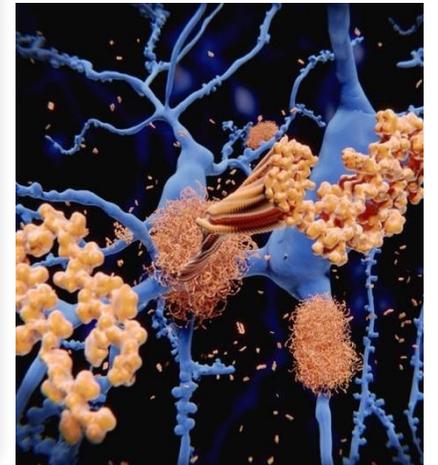

NeuroRestore[®] – *Trk-PAM improving neuronal function & cognition in Alzheimer's disease*

The importance of BDNF & NGF signaling in Alzheimer's

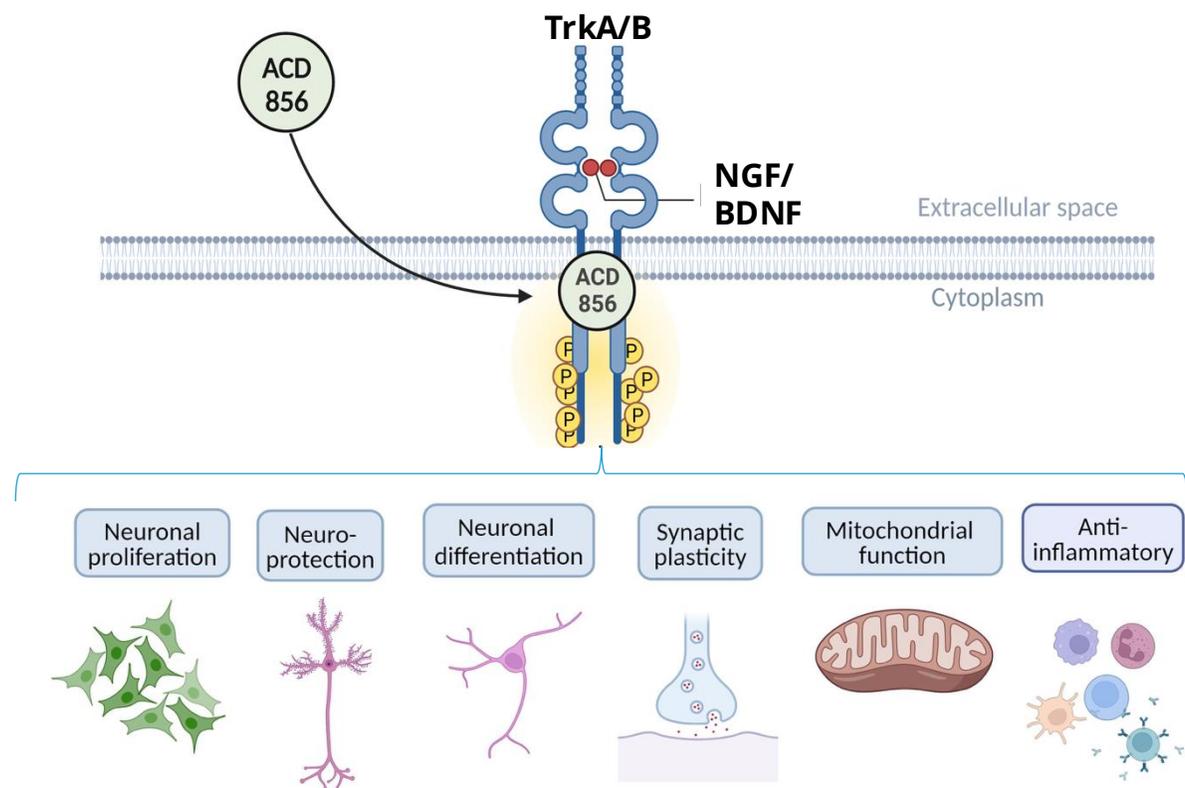

- The neurotrophins Brain-Derived Neurotrophic Factor (BDNF) and Nerve Growth Factor (NGF) bind to their respective receptors, TrkB and TrkA and are **key for brain health and cognition**
- BDNF& NGF signaling are implicated in several key neuronal functions, including **cholinergic function**, hippocampal neurogenesis and **synaptic plasticity**
- **Loss of NGF-dependent cholinergic neurons** in the basal forebrain and hippocampal atrophy are early hallmarks of Alzheimer's disease and **correlates with cognitive decline**
- **Certain genetics** in man, e.g. BDNF-Val66Met polymorphism, leads to **lower levels of BDNF**, and is associated with **more rapid cognitive impairment** and **increased disease progression** in Alzheimer's

Reduced BDNF and/or NGF-levels could limit the brain's ability to withstand pathological conditions

Mechanism of Action of NeuroRestore ACD856

- ACD856 is a novel oral small molecule positive modulator of Trk-receptors **enhancing the signaling** of neurotrophins such as **NGF & BDNF**
- The enhanced signaling leads to immediate **symptomatic effects** & with potential **long-term benefits**
- The long-term effects of ACD856 could include **improved neuronal function, increased mitochondrial function & enhanced cognition**, etc

Potential for **disease modifying effect & improved learning and memory**

NeuroRestore® – Cognitive Enhancer Improving Learning & Memory Ability

Stages of memory formation

LEARN

Transforming information into a form that can be stored in memory

STORE

Maintaining the encoded information in memory

REMEMBER

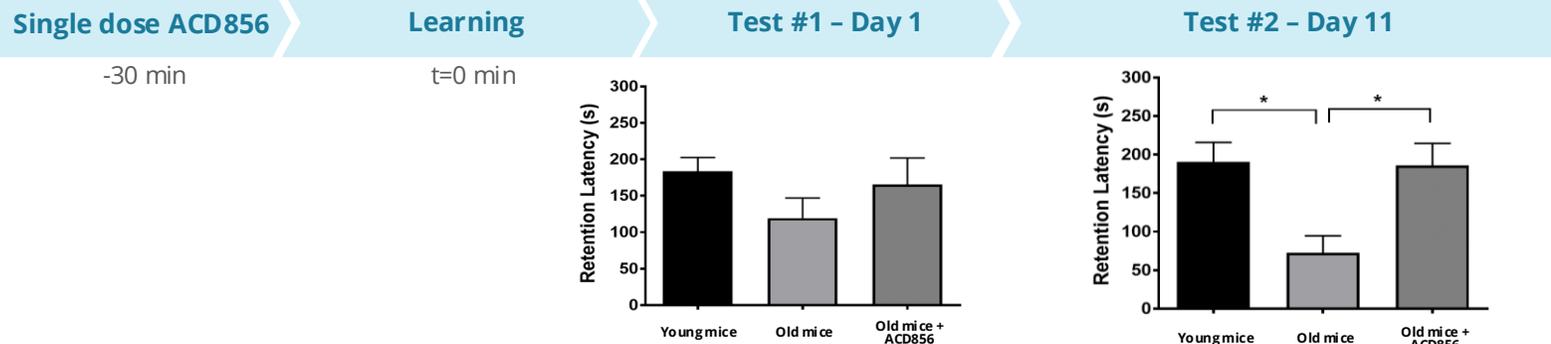

Re-accessing the information from the past which has been encoded & stored

NeuroRestore has in pre-clinical models shown that it can improve the ability to learn & remember information, so the information is accurately recollected when needed

Preclinical data on Pro-cognitive & Disease Modifying Effects

ACD856 improves aged-induced memory impairment

- 18-months old animals were used to study effects on age-induced memory impairment and compared to young animals
- Two memory tests were performed 1 or 11 days after learning

ACD856 could fully revert the memory impairment in old animals to the level in young animals

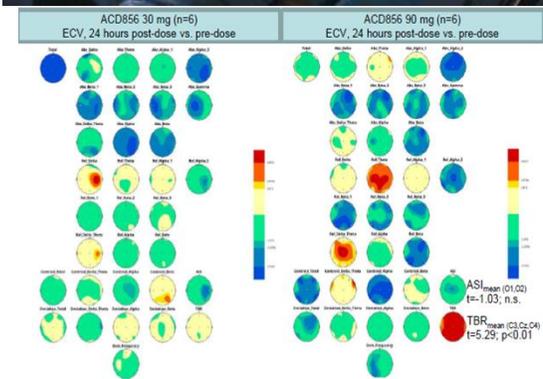

Supporting data

- ✓ Improves memory impairment, presumably via increased synaptic function/plasticity
- ✓ Increases the levels of BDNF in cortical neurons and in brains of aged mice
- ✓ Enhances neurite outgrowth and neuronal proliferation
- ✓ Protects against amyloid-beta induced neurotoxicity
- ✓ Improves mitochondrial function
- ✓ Displays a sustained antidepressant-like effect

Data also suggest a disease-modifying effect by increasing plasticity

Phase I Demonstrated Safety, Tolerability & Target Engagement

- ACD856 is **safe & well tolerated**
 - Single and repeated dosing with ACD856 did not result in any serious adverse events in healthy volunteers at the tested dose levels
- ACD856 has an **excellent PK profile** suitable for **once daily** oral dosing
 - ACD856 has a rapid absorption, a long half-life of ~ 20 hours, high bioavailability and a linear dose-dependent exposure
- ACD856 **present in CSF** with a ratio of ACD856 in CSF to unbound average ACD856 levels in plasma at **> 37%**
 - **ACD856 pass the BBB** and measured concentrations in CSF confirms a **high CNS exposure**
- ACD856 MAD qEEG results shows clear **CNS target engagement**
 - EEG pattern supports pro-cognitive as well as antidepressant effects of ACD856

Vigilance control brain maps for 30 and 90 mg cohorts

Now preparing for phase IIa study in Alzheimer's patients

Grant financed Phase IIa study to investigate the safety & efficacy of ACD856 in Alzheimer's disease

AlzeCure receives EU grant for Phase 2 clinical trial of NeuroRestore ACD856 for Alzheimer's disease

February 17, 2025

AlzeCure Pharma AB (publ) (FN STO: ALZCUR), a pharmaceutical company that develops candidate drugs for diseases affecting the nervous system, focusing on Alzheimer's disease and pain, today announced that its project NeuroRestore ACD856 has received €2.5m from the EU's European Innovation Council.

This funding will support AlzeCure's planned Phase IIa study of NeuroRestore ACD856 in Alzheimer's patients. In addition, higher doses of ACD856 will be evaluated in humans, as the good safety profile allows for further dosing. ACD856 has the potential to be the first drug in a new category of Alzheimer's drugs – positive allosteric modulators of Trk receptors (Trk-PAMs), which increase BDNF and NGF signaling.

"We are delighted to have been awarded a €2.5m grant from the European Innovation Council (EIC) for our innovative Alzheimer's treatment. The support from the EIC Accelerator program is a recognition of the project and will be crucial in advancing our clinical trials and bringing this much-needed Alzheimer's treatment to patients," said Johan Sandin, Chief Scientific Officer at AlzeCure Pharma

TrkA-PAM by Eisai: Disease-Modifying Therapy for Neurodegenerative Diseases

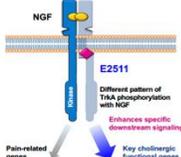

FIRST-IN-HUMAN (FIH), SINGLE- AND MULTIPLE-ASCENDING-DOSE (SAD/MAD) STUDIES IN HEALTHY SUBJECTS OF E2511, A NOVEL TROPOMYOSIN RECEPTOR KINASE A (TrkA) POSITIVE ALLOSTERIC MODULATOR (PAM)

Pau Aceves¹, Nancy Hall², Cuiyuan Cai³, Jagadeesh Aluri², Satish Dayal², Takuya Yagi², Julia Chang², Masaki Mikamoto³, Garth E. Ringheim², Tomioka Takesuya³, Naoki Hiramatsu³, Robert Gordon¹, Luigi Giorgi¹
 1. Eisai Ltd., Hatfield, United Kingdom. 2. Eisai Inc., Nutley, NJ, USA. 3. Eisai Co. Ltd., Tsukuba, Japan.

Introduction

- Cholinergic innervation is affected early in multiple neurodegenerative diseases and correlates with cognitive dysfunction^{1,2}
- The progressive senescence and eventual loss of cholinergic neurons in Alzheimer's disease (AD) is correlated with cognitive impairment
- Nerve growth factor (NGF) plays a major role in the maintenance and function of cholinergic neurons³ (see Figure 1)

Figure 1. Activation of specific trophic signaling of TrkA

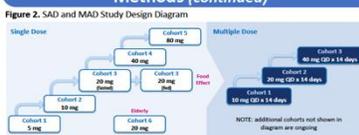

- Activation of NGF-induced trophic signaling via TrkA has potential as a disease modifying therapy to restore cholinergic innervation in neurodegenerative diseases, including AD⁴
- E2511 is a novel orally bioavailable small molecule TrkA biased PAM that has shown reinervative effects on cholinergic neurons in nonclinical studies without NGF-associated hyperalgesia

Methods

- The main objectives of the E2511 FIH Phase 1 studies (SAD [completed] and MAD [ongoing]) are to evaluate the safety, tolerability and pharmacokinetics (PK) in healthy subjects
- Both SAD and MAD are randomized, double-blind and placebo-controlled studies
- The SAD evaluated 5 cohorts in adults and one cohort in elderly subjects (Figure 2); food effect was also evaluated in Cohort 3
- Repeat dosing with E2511 (once daily for 14 days) is currently under evaluation in the MAD study (3 cohorts completed; Figure 2)
- Safety was evaluated through the review of adverse events, physical examinations, clinical laboratory tests, vital signs, electrocardiogram and electroencephalograms
- Serial blood samples were collected for determination of plasma E2511 concentrations
- In MAD Cohorts 1 to 4, CSF was collected via lumbar puncture (LP) for PK/PD assessments in two occasions (1 pre-dose and 1 post-dose)

Methods (continued)

Results

Subjects

- A total of 40 and 24 healthy adult subjects have been dosed in the SAD and MAD studies, respectively (Table 1); and 5 Elderly subjects (3 E2511; 2 placebo) in the SAD

Table 1. SAD and MAD Baseline Subject Characteristics

Parameter (SD)	Single Dose					Multiple Dose				
	5mg (n=10)	10mg (n=10)	20mg (n=10)	40mg (n=10)	80mg (n=10)	10mg (n=10)	10mg (n=10)	40mg (n=10)	80mg (n=10)	80mg (n=10)
Age, mean years (SD)	34(9)	38 (10)	41(10)	34(9)	35 (9)	34(9)	34(10)	38(10)	35(10)	35(10)
Female, %	40	50	33	33	33	33	35	0	33	50
Race, %										
White	70	67	67	33	67	100	67	68	33	50
Black or African American	20	33	33	33	0	0	0	0	0	0
Asian	10	0	0	0	0	0	0	0	0	0
Hispanic or Latino	0	0	0	0	0	0	0	0	0	0
Other	0	0	0	0	0	0	0	0	0	0
Weight, mean kg (SD)	71(12)	73 (14)	71 (14)	71(13)	74(14)	72 (9)	71 (12)	72(12)	84 (13)	76 (16)
BMI, mean kg/m ² (SD)	25(3)	25(3)	25(3)	24(3)	24(3)	25(4)	25(3)	25(3)	28(3)	25(4)

Safety

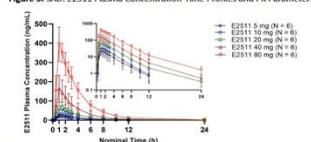

- Single and multiple oral (PO) doses of E2511 were safe and well-tolerated across the investigated doses in adult and elderly healthy subjects
- Most common (≥2) treatment-emergent adverse event (TEAE) in the SAD was contact dermatitis (same incidence in active and placebo-treated subjects [10%])
- Most common (≥2) TEAEs in the MAD were post-LP syndrome, headache, back pain and nausea; generally thought to be related to the LP procedures
- No subjects were withdrawn due to drug-related safety events
- There were no dose dependent, serious or severe TEAEs
- There were no clinically significant changes in the evaluated safety parameters (safety laboratory, vital signs, ECG, EEG and physical exam) on E2511 compared to placebo
- SAD exposure-response analyses confirmed no effects on the Holter ECG parameters, including HR, cardiac repolarization (QTcF), and cardiac conduction (PR, QRS)

Results (continued)

SAD: E2511 Clinical Pharmacokinetic Results

- Rapidly absorbed ($t_{max} = 1$ hour), with a plasma half-life of 3.19 hours (Figure 3)
- Plasma exposures (C_{max} and AUC) increased dose proportionally over the dose range of 5 to 80 mg (power model exponent [90% CI]: 1.09 [0.92, 1.25] for C_{max} and 1.08 [0.91, 1.25] for AUC_{0-24h})}

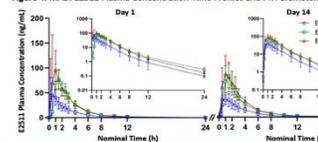

Figure 3. SAD: E2511 Plasma Concentration-Time Profiles and PK Parameters

MAD: E2511 Clinical Pharmacokinetic Results

- There was little or no accumulation observed following 14 days of dosing (Figure 4)
- There was no evidence of time dependent kinetics

Figure 4. MAD: E2511 Plasma Concentration-Time Profiles and PK Parameters

Parameter (SD)	5 mg (n=10)	10 mg (n=10)	20 mg (n=10)	40 mg (n=10)	80 mg (n=10)
C_{max} (ng/mL)	215 (40.8)	291 (58.0)	63.7 (81.8)	156 (50.8)	402 (18.2)
t_{max} (h)	1.0 (1.1, 1.3)	1.0 (1.0, 1.3)	1.0 (1.0, 1.3)	1.0 (1.0, 1.3)	1.1 (1.1, 1.3)
AUC _{0-24h}} (ng·h/mL)	75.6 (16.9)	97.5 (20.8)	222 (55.7)	497 (55.3)	1400 (21.5)
CL _R (L/h)	85.9 (14.0)	102 (20.2)	98.7 (19.9)	80.2 (25.2)	58.4 (23.7)
V_d (L)	248 (41.5)	402 (77.2)	425 (77.1)	407 (51.4)	314 (14.3)
$t_{1/2}$ (h)	2.63 (0.8)	2.72 (0.5)	3.25 (2.9)	3.52 (0.8)	3.83 (0.7)

- Food (standardized high fat, high calorie meal) led to a decrease of 19% in C_{max} and 15% in AUC compared to fasted conditions (at a dose of 20 mg)
- Plasma exposures in elderly and younger adult subjects were deemed comparable (at a dose of 20 mg, as Elderly plasma PK exposures (N=3) were fully contained within the observed ranges of younger adults (N=6, at same dose)

Parameter (SD)	10 mg QD		20 mg QD		40 mg QD	
	Day 1 (n=6)	Day 14 (n=6)	Day 1 (n=6)	Day 14 (n=6)	Day 1 (n=6)	Day 14 (n=6)
C_{max} (ng/mL)	47.4 (8.8)	81.7 (20.2)	86.1 (22.3)	91.8 (22.3)	110 (10.9)	95.0 (35.9)
t_{max} (h)	1.0 (0.5, 1.5)	1.0 (0.5, 2.5)	1.1 (0.5, 1.5)	1.0 (0.5, 1.5)	1.0 (0.5, 2.0)	1.0 (0.5, 2.0)
AUC _{0-24h}} (ng·h/mL)	119 (19.3)	149 (24.6)	207 (25.7)	271 (24.2)	276 (34.4)	309 (30.8)
CL _R (L/h)	85.7 (17.4)	71.7 (24.4)	84.4 (22.8)	73.3 (18.2)	845 (14.7)	129 (30.8)
V_d (L)	395 (64.9)	478 (25.7)	411 (25.7)	448 (25.9)	482 (25.4)	292 (39.8)
$t_{1/2}$ (h)	2.87 (0.6)	4.93 (2.2)	3.72 (2.0)	4.21 (2.7)	3.27 (1.1)	4.25 (1.7)
R_{in} (ng/h)	N/A	1.06 (132)	N/A	0.997 (48.3)	N/A	0.893 (34.9)
R_{in} (ng/h)	N/A	1.12 (57.8)	N/A	1.03 (25.2)	N/A	1.12 (18.1)
R_{in} (ng/h)	N/A	1.22 (18.1)	N/A	1.02 (25.1)	N/A	1.12 (18.2)

- Geometric mean (CV) values shown unless otherwise noted; N/A: not applicable.
- Median (range).
- R_{in} : C_{max} Accumulation ratio determined based on C_{max} [Day 14]/ C_{max} [Day 1].
- R_{in} : AUC Accumulation ratio determined based on AUC_{0-24h} [Day 14]/AUC_{0-24h} [Day 1].
- R_{in} : Time dependency ratio was determined based on AUC_{0-24h} [Day 14]/AUC_{0-24h} [Day 1].

Conclusions

- E2511 presents an adequate single and multiple dose safety profile in healthy adults up to the currently highest evaluated doses (80 mg PO in SAD; 40 mg QD PO in MAD)
- E2511 has shown predictable single and multiple dose PK with a short plasma half-life that is consistent with human PK projections based on non-clinical data
 - Dose-proportional plasma PK over the dose range of 5 to 80 mg (in the SAD) and time-invariant PK (up to at least 40 mg QD in the MAD)
 - Mild effect of food on rate and extent of plasma E2511 exposure supports dosing without regards to food
 - Plasma E2511 exposures (C_{max} , AUC) in a small group of elderly subjects suggest there is no need for dose adjustment in the target population
- These results support further development of E2511 as a disease-modifying therapy for neurodegenerative diseases

” These results support further development of E2511 as a disease-modifying therapy for neurodegenerative diseases”

The data is validating & increasing interest in NeuroRestore ACD856

AlzeCure's ACD856 in Comparison to Eisai's E2511

	Eisai E2511	AlzeCure ACD856
Mechanism of Action	Positive allosteric modulator	Positive allosteric modulator
Target	TrkA	TrkA, TrkB and TrkC
Type	Novel small molecule (<400 Da)	Novel small molecule (<400 Da)
IP	Patent granted	Patent granted in US, Japan, EU and China, several territories are processing applications
Stage of dev.	Phase I: SAD/MAD, half-life = 3.2 h	Phase I: SAD/MAD, half-life = 20 h
Effect on neurotransmitters	Yes ACh	Yes Serotonin, noradrenaline and dopamine
Effect on neurite outgrowth	No, not reported	Yes, in two different in vitro models
Neuroprotective	Yes, in two in vivo models	Yes, in two in vitro models
Effect on cognition	Not reported	Yes, cognitive enhancement in several models
Effect on depression	Not reported	Yes, and long-term effects + additive to SSRI
Anti-inflammatory effects	Not reported	Yes, both in vivo & in vitro

Alzstatin[®] – *gamma-secretase modulator targeting amyloid production for prevention and treatment of Alzheimer's disease*

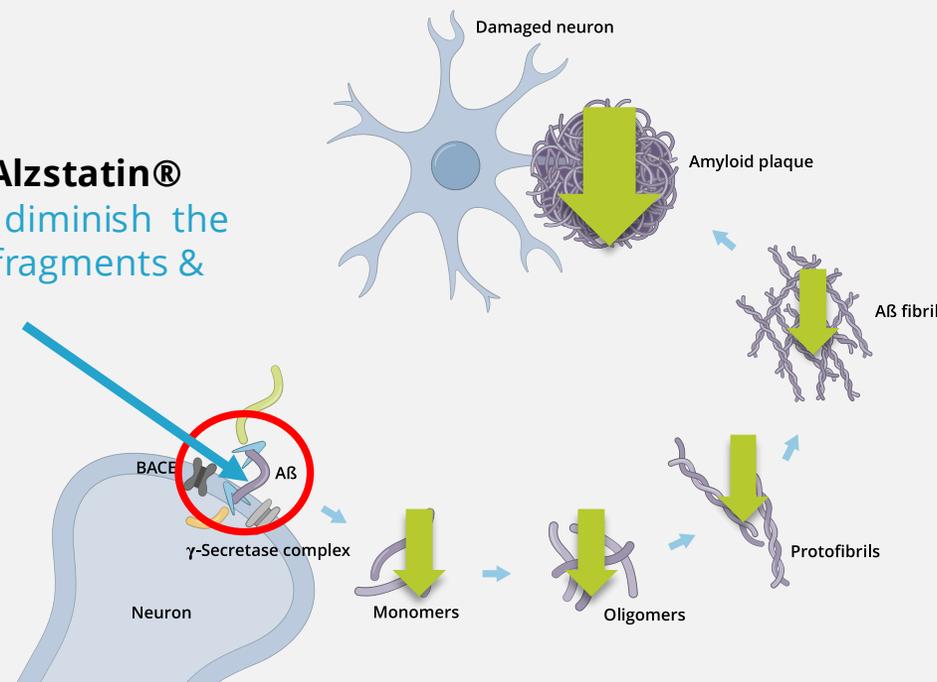

The Alzheimer's Brain and its Destruction by Toxic Protein

The Amyloid Cascade

Toxic protein formations, built up of A β 42, are harming and destroying brain structures

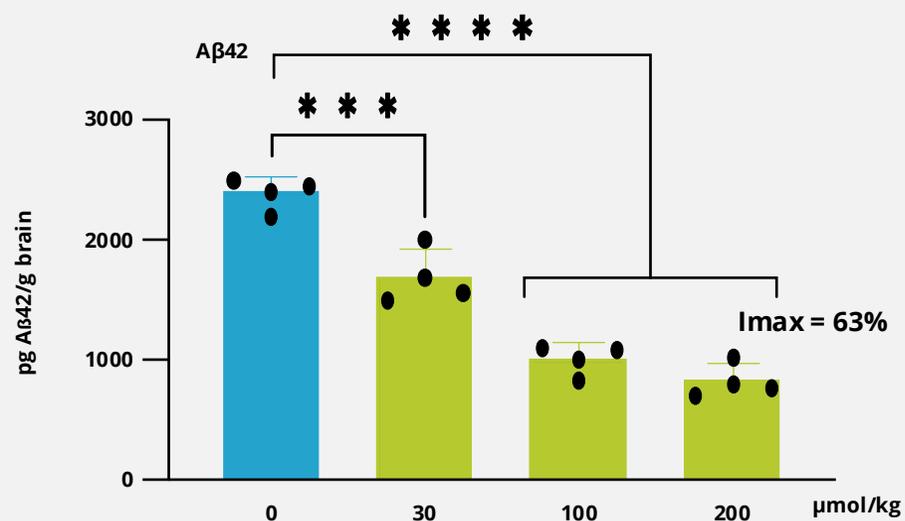

AlzeCure's GSM¹ **Alzstatin®** reduces A β 42 to diminish the build-up of toxic fragments & plaque

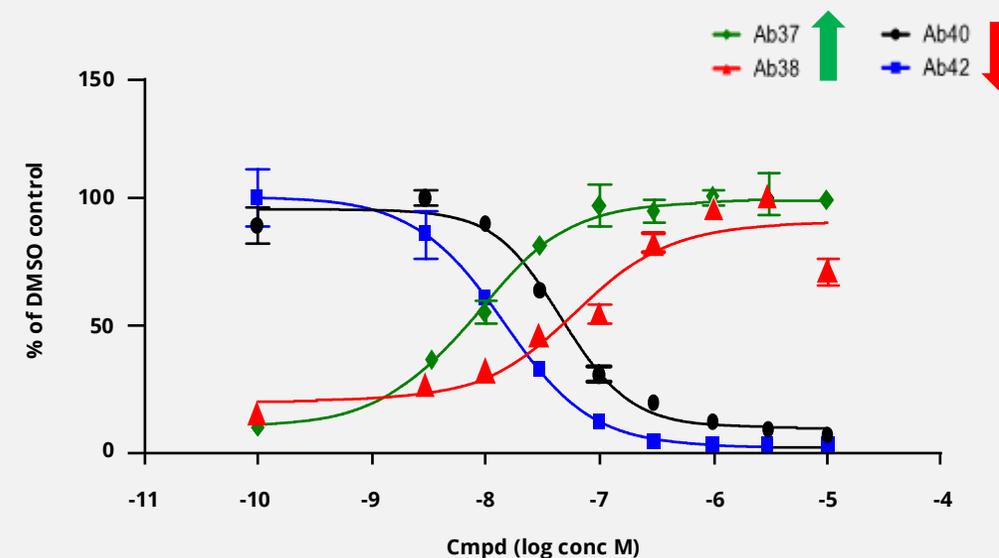

Alzstatin® – Potent Reduction of Toxic A β 42 & Increasing Protective A β 37 & A β 38

Alzstatin® potently reduces the amount of toxic brain A β 42 in animals

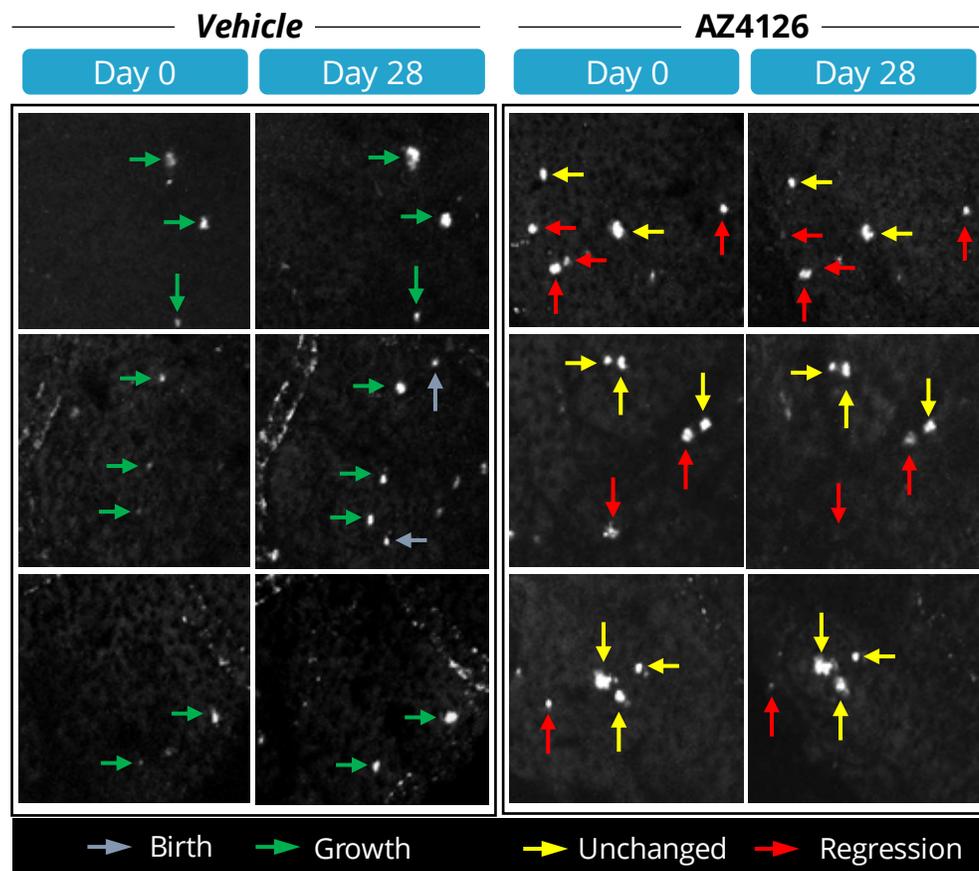

Alzstatin® reduces toxic A β 42 and A β 40, while increasing protective A β 38 and A β 37 peptides

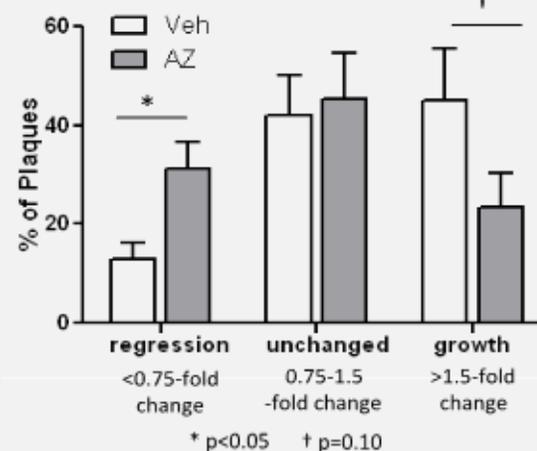

New preclinical data shows Induced Plaque Regression

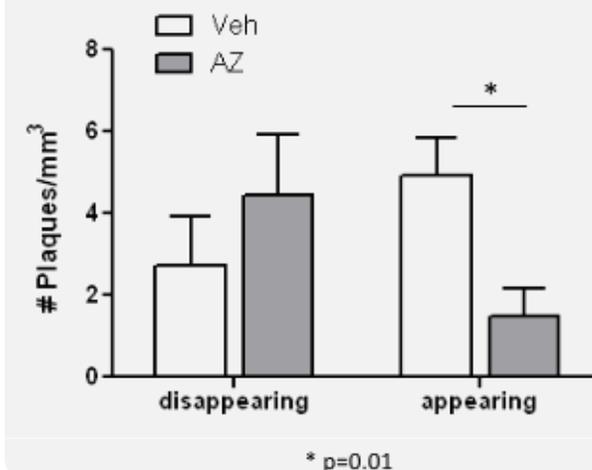

Two-photon-study preclinical study in APP/PS1 mice

Distribution of plaque growth & regression

Plaque appearance or disappearance

28-day GSM treatment

Reduces amyloid plaque growth

Decreases new plaque appearance

Induces plaque regression¹

Multiple Treatment Populations

– Maintenance, Combination & Preventive Therapy

Maintenance therapy - in patients with established Alzheimer's disease

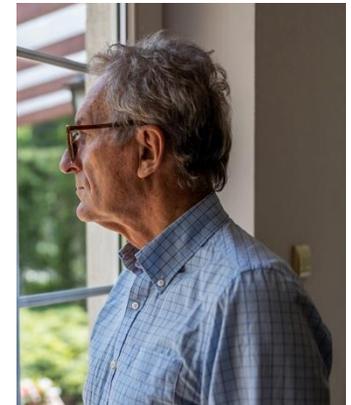

- Treatment after initial plaque clearance by monoclonal antibody treatment (as initially proposed by Lilly) e.g., with: Lecanemab (Eisai/Biogen/Bioarctic) & Donanemab (Lilly)

Combination therapy - together with monoclonal antibody treatment - early AD

- Combine plaque clearance by monoclonal antibody treatment and reduction of A β 42 production by GSM

Preventive therapy - based on genetic risk factors¹ and biomarkers

- Early stand-alone treatment before onset of symptoms and any major neurodegeneration occurs (prior to rapid increase in Tau pathology)
- Prevents build-up of amyloid – an early pathological feature of AD
- Familiar forms of the disease (incl. Down's syndrome) suitable for initial proof of concept clinical studies

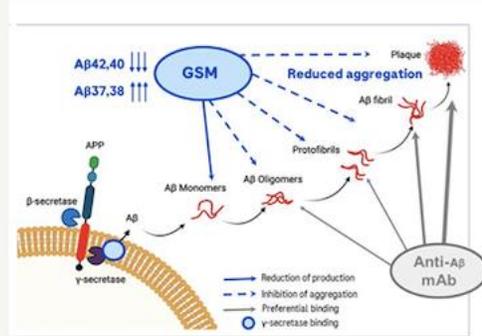

Interim phase II data on a GSM by Roche expected in 2026

RG6289, a FIC oral γ -secretase modulator in Alzheimer's disease

Targeting amyloid precursor protein processing to prevent $A\beta$ -aggregation

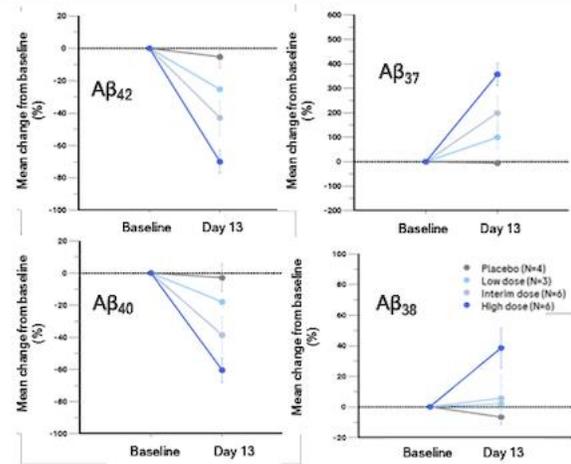

GSMs reduce $A\beta$ aggregation¹

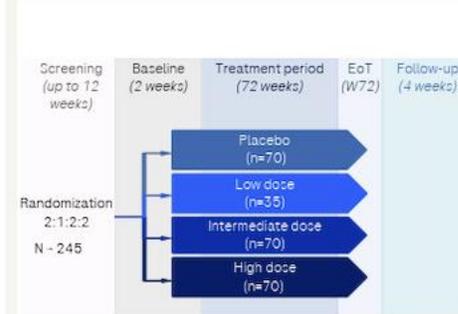

- RG6289 a potentially first-in-class oral GSM with high potency and selectivity
- GSMs alter APP processing: Reduction of $A\beta$ 42/40 and elevation of $A\beta$ 38/37
- Selective for APP with no effect on Notch
- GSMs prevent amyloid accumulation and halt plaque formation in animal model

Ph I dose escalation results for RG6289²

- Daily administrations of RG6289 decreased $A\beta$ 42/40 and increased $A\beta$ 37/38 concentrations in CSF of healthy volunteers in a dose dependent manner

Ph II (GABriella) study design³

- Ph IIa (GABriella) investigates RG6289 in individuals at risk for or at prodromal stage of AD exploring safety, tolerability and effects on AD-related biomarkers
- **Interim data expected in 2026**

The data is **validating & increasing interest in Alzstatin®**

PainLess – targeting unmet medical needs within pain

Introduction to our platforms PAINLESS

Osteoarthritis & severe pain conditions

> 300 million patients

Project: **ACD137**

Negative allosteric modulator of TrkA-receptors in research phase

Neuropathic pain

> 600 million patients

Project: **ACD440**

Topical TRPV1 antagonist in clinical Phase II

ACD137 – Non-Opioid Treatment of Osteoarthritis & Severe Pain

Attractive target population

E.g., **osteoarthritis** in patients who have experienced insufficient pain relief from 1st line standard of care or unacceptable side effects

Clinical validation

Mechanism with **strong validation** – step-changing clinical efficacy with novel anti-NGF mAbs - sets the standard for future therapies

Blockbuster opportunities

Blockbuster opportunities for NGF therapies that would avoid adverse events and allow non parenteral routes of administration

Differentiation factors for TrkA-NAM ACD137¹

- **TrkA ACD137 selective MoA** vs anti-NGF antibodies also effecting p75 signaling
 - Maintain **potent clinical efficacy**
 - **Better safety profile**
- Convenient **oral administration** - small molecule compound
- **No addiction** compared to opioids

1) OA = Osteoarthritis ^) LBP = Lower Back Pain

<https://www.alzecurepharma.se/sv/wp-content/uploads/sites/3/2025/09/alzecure-trka-nam-neupsig-2025-poster.pdf>

26 <https://www.alzecurepharma.se/en/alzecure-presents-new-positive-data-for-the-trka-nam-pain-project-against-osteoarthritis/>

ACD137 positions AlzeCure in next-generation TrkA pain therapies

Compound	Company	TrkA (nM)	TrkB (nM)	TrkA vs TrkB	Status	Indication	
ACD137	AlzeCure	0.87	26 400	30,300	Preclin	OA¹ & other pain conditions	
Cmpd #10 AK1830	Array Bio. Ashai Kasei	0.038	210	5,500	Phase IIb	OA LBP [^]	
Cmpd #23	Pfizer	0.64	145	230	inactive	OA	
Cmpd #1	Merck	99	>81000	>820	inactive	OA	

AlzeCure has synthesized novel & highly potent & selective TrkA-NAM's ... and is a follower to Asahi Kasei's asset which has entered phase IIb with expected read-out in 2026

ACD137 demonstrates anti-NGF–like efficacy with improved safety profile

TrkA-NAM ACD137 – Efficacy on par with NGF antibody

- We have used the rat **MIA model** to assess the cartilage degeneration, localized inflammation, and pain behaviors after administration of TrkA-NAM compounds, including **ACD137**, as well as **Tanezumab**
- **Results show:**
 - Potent **pain relief** in both movement-induced and evoked pain
 - Significant **anti-inflammatory effect** was observed following administration of TrkA-NAM compounds
- The **analgesic effect** of ACD137 is **similar to the effect of the anti-NGF antibody Tanezumab**, which have in several clinical trials demonstrated significant and robust pain relief
- ACD137 was also found to display a **protective effect towards articular cartilage damage** and significantly improved a number of cartilage and knee joint structural parameters
- ACD137 was **well tolerated** with **no clinical symptoms or histopathological findings** of rapidly progressing OA, a problematic side effect observed for anti-NGF antibodies, nor were any effects seen on neuronal ganglia

The results emphasizes the broad applicability of our TrkA-NAM ACD137 in various severe pain states, including osteoarthritis

ACD440 – Novel TRPV1 antagonist in clinical phase for neuropathic pain

Project overview

Emanates from Big Pharma

- Approximately **20M USD** already **invested** in project development
- **Mode of action confirmed** in several Phase 1 clinical trials
- Synthesized compound and formulation developed

TRPV1 – Optimized for local delivery

- The vanilloid receptor subtype 1 (TRPV1) is expressed in nociceptive sensory neurons
- TRPV1 is upregulated in the skin of patients with neuropathic pain
- **Strong scientific support** for peripheral/local treatment with TRPV1 antagonists of **both neuropathic & nociceptive pain**

Positive clinical trial results in phase Ib & IIa

- Developed **topical gel formulation to avoid AEs** associated with systemic TRPV1 blockade
- **Clinical trial** with topical formulation was initiated and **successfully finalized**
- Phase Ib study addressed **safety, tolerability & efficacy – POSITIVE OUTCOMES**

Presented detailed positive phase IIa data

Positive phase IIa results for First-in-Class ACD440

- Demonstrate **Positive Proof-of-Mechanism (PoM)** results **in patients** with chronic **peripheral neuropathic pain** in a placebo cross-over trial
- The patients have had **chronic pain** for many years & were on **concomitant medication**
 - A **significant analgesic effect** on pain induced by cold and heat.
 - The data are **in line with previously** reported phase Ib **results**
 - **Pain reduced** by appr. **50%** - a **clinically significant magnitude**
- The **bedside test identified eligible patients**
- **Well tolerated** as a topical gel on the skin, which shows **suitability for continued clinical development**

Now preparing for next phase II and phase III trial

Positive regulatory support from the FDA

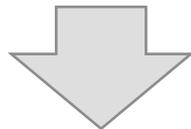

AlzeCure's pain project ACD440 granted orphan drug status in the US by the FDA

July 15, 2025

AlzeCure Pharma AB (publ) (FN STO: ALZCUR), a pharmaceutical company that develops candidate drugs for diseases affecting the nervous system, focusing on Alzheimer's disease and pain, today announced that the US Food and Drug Administration (FDA) has granted the company's application for orphan drug status for the clinical pain candidate drug ACD440.

AlzeCure receives positive FDA response regarding Phase II/III studies with ACD440 in a rare disease

AlzeCure Pharma AB (publ) (FN STO: ALZCUR), a pharmaceutical company that develops candidate drugs for diseases affecting the nervous system, focusing on Alzheimer's disease and pain, today announced it has received a positive response from the US Food and Drug Administration (FDA) regarding the preIND application submitted in advance of a planned application for orphan drug status.

Granted **orphan drug designation** in erythromelalgia and positive response on potential **pivotal** phase II/III study from the FDA

Erythromelalgia

- Erythromelalgia is a **rare chronic** painful disorder – “burning feet syndrome” existing in **children & adults**
- Triad of redness, swelling and intense pain
- Pain comes in attacks, flares, **triggered by heat** or exercise
- One **pain flare can last** for an hour and **up to days**

Flare on Feet

BEFORE

DURING

Flare on Face

BEFORE

DURING

Flare on hands

BEFORE

DURING

- Divided into Primary erythromelalgia, is mostly hereditary
- **No efficacious medical treatment exists**

Summary

Key Investment Highlights in AlzeCure

-  Targeting areas of **significant unmet medical needs**
-  **Strong team** with extensive experience and track record – from idea to clinic
-  **Platforms** with **first-in-class properties** and potential **game-changers**
-  **Parallel investments** in several candidates and potent **follow-up programs**
-  **Multi-billion dollar** market **opportunities**
-  Evolved from a discovery into a **phase II company** – **supported by EIC***

Appendix

The AlzeCure management team

- Extensive experience from the industrial drug development value chain

MANAGEMENT TEAM

Martin Jönsson
CEO

- Extensive experience in various senior management positions with >20 years of international experience in the industry
- Education: MBA from Lund University in Sweden, Ottawa, Canada and Freiburg, Germany

EXPERIENCES

Johan Sandin
CSO, Ph.D.

- Expert in in vivo Pharmacology with over 20 years of experience from the drug discovery industry within Neurology
- Education: Ph.D. in Neuropharmacology, Karolinska Institute, Sweden

EXPERIENCES

Märta Segerdahl Storck
CMO
M.D., Ph.D.

- Broad and extensive experience in global development and clinical operations from Pharma industry within CNS & Pain
- Education: M.D., Karolinska Institute, Stockholm, Sweden

EXPERIENCES

Pontus Forsell
Head of Discovery,
Ph.D.

- Expert in drug screening with +20 years of experience from industrial research and drug development within CNS and Pain
- Education: Ph.D. in Medical Biochemistry & Biophysics from Karolinska Institute, Stockholm, Sweden

EXPERIENCES

Birgitta Lundvik
CFO

- More than 25 years of experience from industry with a broad experience of venture capital companies
- Education: MSc in business from Uppsala University and an eMBA in finance from Stockholm Business school, Sweden

EXPERIENCES

Cecilia Wadell
Head of Development,
PhD

- Extensive experience in all phases of drug development from preclinical development to phase 3 and also experience with orphan drugs with +25 yrs in pharma industry.
- Education: Ph.D. from Uppsala University, Sweden

EXPERIENCES

Board of Directors

- Complementing expertise for the continuous development of AlzeCure

BOARD OF DIRECTORS

Thomas Pollare
Chairman of the Board
Ph.D., M.D.

- Strong background in both Life science industry and the Private equity market
- Education: M.D. Karolinska Institutet, Ph.D. Uppsala University

EXPERIENCES

Jan Lundberg
Director of the Board
Ph.D.

- Extensive experience from leading positions in global pharmaceutical companies, including as global head of research at AstraZeneca & global head of research and development at Eli Lilly
- Education: Ph.D. of pharmacology at the Karolinska Institute

EXPERIENCES

Eva Lilienberg
Director of the Board
M.Sc.

- Extensive experience from Big Pharma and consulting within Regulatory & Market Access
- Education: MSc in Pharmaceutical sciences at Uppsala University

EXPERIENCES

Ragnar Linder
Director of the Board
M.Sc.

- Strong industrial marketing and strategic experience, also in the CNS/Dementia area
- Education: Master of Chem Ing., Royal Institute of Technology, Stockholm

EXPERIENCES

Dr Janet Hoogstraate
Director of the Board
Ph.D.

- Extensive experience from in life science, in preclinical research, the pain area and biotech
- Education: PhD in Biopharmaceutical Sciences from the University of Leiden in the Netherlands and an eMBA from Hult International Business School.

EXPERIENCES

The AlzeCure scientific advisory

- Network of leading scientific advisors within neurodegenerative disorders

SCIENTIFIC ADVISORS

Professor
Bengt Winblad

- Professor at Karolinska Institutet
- Recipient of the Life-Time Achievement Award from the US-based Alzheimer's Association
- Recipient of the Swedish Brain Foundation's Jubilee Award

EXPERIENCES

Professor
Henrik Zetterberg

- UK Professor of neurochemistry, Chief physician at Sahlgrenska University Hospital and Professor at University College London (UCL)
- Chair of the Swedish Alzheimer's Foundation Scientific Council

EXPERIENCES

Professor
Peter Snyder

- Vice President of Research and Economic Development and Professor of Biomedical Sciences at the University of Rhode Island, Kingston, RI
- Senior Associate Editor for Alzheimer's & Dementia: The Journal of the Alzheimer's Association

EXPERIENCES

Ass. Professor
John Harrison

- Professor at Alzheimer Center VU Medical Center in Amsterdam and visiting professor at the Institute of Psychiatry
- Psychology & Neuroscience at King's College London

EXPERIENCES

Doctor
Rolf Karlsten

- University Hospital, Uppsala, Sweden MD, specialist in anesthesiology and pain management
- Head of the Interdisciplinary Pain Center at Uppsala University Hospital

EXPERIENCES

Professor
Sven Ove Ögren

- Professor at Karolinska Institutet, Sweden
- More than 400 publications in the field of neuropsychiatry and cognition

EXPERIENCES
